THIS PUBLICATION IS A CUMULATIVE SUPPLEMENT TO THE 1981-82 EDITION OF THE REGISTRY OF TOXIC EFFECTS OF CHEMICAL SUBSTANCES (RTECS)

The Registry is not a static collection of data. It undergoes constant change as both new substances and new data for listed substances are entered. The Registry's quality control program verifies and corrects cited data, resulting in the modification or deletion of individual data lines or entire substance entries.

This edition is a cumulative supplement to the last full printed edition of RTECS (1981-82). It contains substances added to the file and substances for which changes were made in the data between January 1983 and January 1985. Since this edition is a cumulative supplement, the data from the 1983 Supplement is included; however, the 1981-82 Edition of RTECS must still be used if access to the full Registry is needed.

Because the complete Registry is no longer published annually in book form, the most current versions of the RTECS file remain the on-line data base (available through both the National Library of Medicine—MEDLARS—and the Chemical Information System—CIS) and the latest quarterly microfiche issue. Appendix V contains information about subscribing to and interrogating the computerized system; Appendix VI information on subscribing to the microfiche edition.
